

**EQ5 SYNSCAN (Con telescopio GOTO 2001000 PEQ5)**

Sky-Watcher offers simple solutions for users who would like to attach their smaller telescope to a convenient computerized system but do not wish to deal with the weight of the HEQ5 or

EQ6 mount. The EQ5 SynScan mounts use the same Go-To system found in the HEQ5 and EQ6 Pro--SynScan. It allows you to point the telescope at a specific object or even tour the skies at the touch of a button.

The EQ5 SynScan mounts are the perfect instrument for novice visual observers to enjoy astronomy with minimal setup time and in-depth knowledge of the night sky.

- Slewing speed up to 3.4°/sec (800X).
- Guiding speed selectable from 0.25X, 0.50X, 0.75X, or 1X.
- Object database containing complete Messier, NGC, and IC catalogues.
- Periodic Error Correction.
- PC compatibility.
- Upgradeable hand control via internet download.

- Positioning Accuracy up to 1 arc minute. Accuracy enhanced by software collimation error (mount mechanical error) compensation.
- Stepper motors with 1.8° step angle and 64 micro steps driven.

SPECIFICATIONS

Mount Type	Equatorial Go-To
Slow-motion Control	Hand Control
Counterweight(s)	5.1Kgs
